# Aadish B. Rathore

**Frontend Engineer | AI Frontend Engineer**

415-233-2272 | adib.rathore@gmail.com | Portfolio | LinkedIn | GitHub

## SUMMARY

Frontend Engineer with 6 years of experience building responsive web applications, reusable components, and accessible product interfaces. Delivered frontend performance and testing improvements for customer-facing applications. Combines production Angular experience with React and Next.js projects, including a banking copilot and an accessible portfolio, supported by a master's degree in Data Science.

## SKILLS

**Frontend:** React, Next.js, Angular, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, RxJS, NgRx.

**Quality and UI:** Jest, Vitest, Playwright, responsive design, accessibility, reusable components, state management.

**APIs and Tools:** REST, GraphQL, Node.js, Supabase, PostgreSQL, Zod, Git, npm, Vite, Figma, Vercel, Python.

**Additional Exposure:** AWS, Docker, NoSQL, AI coding tools, Cucumber, Agile and Scrum.

## PROFESSIONAL EXPERIENCE

**Frontend Engineer | Abbott** May 2026 - Present

- Modernized frontend components with Angular Signals and Standalone Components, reducing bundle size by 30% and improving change-detection efficiency.
- Optimized rendering and caching to improve application performance by 25% and maintain interactions under 200 ms across desktop and mobile.
- Expanded Jest unit tests, increasing coverage from 80% to 90% and reducing production regressions.
- Improved error handling and API resilience for P1/P2 production issues, reducing user-reported defects by 40%.
- Partnered with UX and requirements teams on UI architecture and shared component patterns, delivering features 20% faster.

**Frontend Engineer | Cognizant** May 2023 - Apr 2026

- Led frontend architecture and delivery of customer-facing analytics dashboards serving more than 10,000 concurrent users.
- Migrated 12 core frontend modules to Standalone Components, reducing the production bundle size by 10%.
- Optimized state management, server-side pagination, and virtualized filtering to maintain UI response times under 200 ms for more than 10,000 simultaneous sessions.
- Established accessibility checklists and reusable component patterns across more than 100 code reviews, reducing UI defects by 30% and QA remediation from 5 days to under 3 days per sprint.
- Managed 6 quarterly deployments and frontend performance targets, reducing feature cycle time from 3 weeks to under 2 weeks.

**Frontend Engineer | TD Bank** Sep 2020 - Apr 2023

- Improved frontend performance for approximately 2 million active customers, reducing application load time by 40%, from 4.2 seconds to 2.5 seconds.
- Architected microfrontend modules with Module Federation, enabling independent deployment across 4 teams.
- Delivered an Atomic Design component library adopted by 4 teams, reducing UI development time by 30% and saving an estimated 480 engineering hours annually.
- Established component testing contracts across more than 200 Jest tests, increasing coverage from 67% to 84% and reducing hotfix deployments.
- Strengthened input validation and API rate limiting, reducing P1 incident frequency by approximately 60%.

## SELECTED PROJECTS

**AdiBank Copilot** | Next.js, React, TypeScript, Supabase
Live Demo | Repository

- Built responsive banking interfaces for account management, transfers, financial analytics, and role-based customer and admin experiences using Next.js App Router and Tailwind CSS.
- Designed a banking assistant for supported questions and transfer requests, with explicit confirmation before assistant-initiated transfers and clear activity history.
- Implemented protected routes, Supabase authentication and row-level security; validated workflows with Jest and isolated PostgreSQL tests using PGlite.

**Frontend Engineering Portfolio** | React 19, Vite, CSS, Playwright
Live Demo | Repository

- Built reusable project cards, theme-aware dialogs, and responsive navigation with keyboard focus management, Escape dismissal, semantic controls, and reduced-motion support.
- Used lazy-loaded routes, loading and error states, and shared content; reduced the largest minified JavaScript chunk from 1.54 MB to approximately 269 KB.
- Added Playwright interaction tests, content and asset checks, ESLint, and GitHub Actions CI to verify navigation, themes, project links, and production builds.

## EDUCATION

**Master of Data Science** | Illinois Institute of Technology | Sep 2023 - Dec 2025

**Bachelor of Technology** | McMaster University | Dec 2020
