SUMMARY

Frontend Engineer with **6 years** building high-performance applications serving 10K+ concurrent users, with a proven track record of cutting load times by 40% and accelerating UI delivery by 30% through reusable design systems. Recently expanded full-stack capabilities by building a Next.js + React + Supabase application integrating AI-powered workflows.

SKILLS

Core: Angular v20, TypeScript, JavaScript, RxJS, NgRx, Jest, React, Next.js, Supabase.

Tools: Node.js, Git, Npm, Python, Vite, VS Code with Copilot, GraphQL, Vitest, Figma.

Platforms: Exposure to: AWS, Docker, NoSQL, AI Tools (Codex, Copilot, Claude), Cucumber, Agile, Scrum.

EXPERIENCE

Frontend Engineer - Abbott (Contractor)

May 2026 - Present

- Implemented Signals and Standalone Components to eliminate Zone.js overhead, **reducing bundle size by 30%** and improving change-detection efficiency.
- Optimized rendering pipelines and caching strategies to **boost application performance by 25%** and maintain sub-200ms interactions across desktop and mobile.
- Authored Jest unit tests to **raise test coverage from 80% to 90%**, reducing regression defects in production.
- Resolved high-priority production issues (P1/P2) by improving error handling and API resilience, **reducing user-reported defects by 40%**.
- Partnered with UX and requirements teams to define UI architecture and **deliver features 20% faster** through shared component patterns.

Frontend Engineer - Cognizant

May 2023 - Apr 2026

- Led end-to-end UI architecture and delivery of customer-facing analytics dashboards, serving 10K+ concurrent external users, driving a **25% lift** in workflow by reducing client churn risk.
- Engineered a migration of 12 core modules to Angular Signals and Standalone Components, eliminating Zone.js overhead to **shrink production bundle size by 10%**, and increasing user engagement.
- Optimized NgRx state management with server-side pagination and virtualised filtering so that 10K+ simultaneous client sessions maintained **sub-200 ms UI response times**.
- Established accessibility compliance checklists and reusable component patterns across **100+ code reviews**, **reducing UI defect rate by 30%** and cutting QA remediation cycles from 5 days to under 3 days per sprint.
- Managed release cadence and performance targets across 6 quarterly deployments, compressing average feature cycle time from 3 weeks to under 2 weeks and enabling 2 additional feature releases per quarter.

Frontend Engineer - TD Bank

Sep 2020 - Apr 2023

- Developed a performance overhaul serving ~2M active customers, cutting app **load time by 40%** (4.2s → 2.5s).
- Architected **microfrontend modules** using Module Federation to enable independent deployability across 4 teams.
- Delivered component library (**Atomic Design**) adopted by 4 cross-functional teams, **reducing new-feature UI build time by 30%** and saving an estimated 480 engineering hours per year in duplicated work.
- Implemented a Jest testing strategy with clearly scoped component contracts across 200+ test cases, **increasing test coverage from 67% to 84%** and cutting hotfix deployments by 25.
- Enforced input sanitization and API rate limiting to reduce P1 incident frequency by ~60%.

PROJECTS

Finance Copilot — Full-Stack AI-Driven Personal Finance App

- Built a full-stack finance assistant using **Next.js, React, and Supabase**, enabling secure user authentication, real-time database operations, and AI-powered financial insights.
- Implemented serverless API routes, RLS-secured Supabase schemas, and responsive React UI components.
- Integrated OpenAI-powered workflows for budgeting, transaction analysis, and conversational financial guidance.
- Demonstrated ability to deliver production-ready full-stack features outside Angular ecosystem.

AI-Enabled Banking Dashboard with Agentic Chatbot

- Built **Angular 20** banking dashboard with an integrated agentic AI assistant capable of executing user requests such as transfers, transaction queries by mapping natural language prompts to typed backend function calls.
- Implemented reusable components, state management, and responsive UI optimized for performance.

EDUCATION

Master of Data Science – Illinois Institute of Technology

Sep 2023 – Dec 2025

Bachelor of Technology – McMaster University

Dec 2020
